Vision

- Singapore's **Smart Nation initiative**, led by the Ministry of Digital Development and Information (MDDI), aims to build a thriving digital future for everyone.
- Launched in **2014**, Smart Nation 1.0 sought to improve lives through seamless and meaningful use of technology.
- Since its launch, Singapore has integrated digital technologies deeply into daily life, creating new opportunities while also needing to manage risks to well-being and social cohesion.
- In **2024**, Singapore introduced **Smart Nation 2.0**, a refreshed vision focused on using technology more effectively to transform the nation's future.
- The new phase shifts from primarily building digital infrastructure to using it strategically to shape Singapore's long-term future.

Smart City achievements

- **99%** of all transactions between citizens and the government can be completed online.
- **High citizen and business satisfaction** with Government Digital Services at **83%** in 2023.
- **99%** of resident households are **connected to the internet**, as of 2022.
- **95%** of small and medium enterprises (SMEs) have adopted at least one digital technology from nine categories: cybersecurity, cloud, e-payment, e-commerce, data analytics, artificial intelligence, Internet of Things, blockchain, and immersive media.

Approach

Solve real problems

Build for the user

We use cookies

We use cookies and other tracking technologies to improve your browsing experience on our website, to show you personalized content and targeted ads, to analyze our website traffic, and to understand where our visitors are coming from.

Products

- More than 40 products in progress
- Use **report cards** mechanism to provide a transparent overview of the work being done on each of the products

Tackle real problems

Share why and how the product solves a problem with updates along the way.

Resource responsibly

Product costs are made open as possible to stay accountable to taxpayers and citizens.

Track impact clearly

Share product outcomes to ensure delivery of clear value to the public.

REDEEMSG

- Paper voucher campaigns were slow to launch and difficult for residents to claim and use.
- Merchants experienced long delays in receiving payments.
- Existing digital alternatives were available apps.
- **RedeemSG** provides a unified platform for create, distribute, and monitor vouchers nationwide.
- Citizens redeem vouchers and merchants accept payments.

We use cookies

- Paper-based tracking made it difficult for organisations to monitor distributions or adapt plans in real time.
- This led to long waiting times, inaccurate records, and limited ability to reach more beneficiaries.
- **DistributeSG** enables government agencies to run distribution campaigns with real-time tracking.
- It includes an admin portal for organisers to manage the on-the-ground tracking of distributed items.

- **Build for Good** is a citizen engagement initiative by Open Government Products that encourages citizens to help improve Singapore.
- People can participate through a **hackathon**, an **accelerator** for winning teams, or by joining
- The initiative aims to create a space where individuals feel empowered to experiment, and build solutions

hack for public good

- **Hack for Public Good (HFPG)** replaces top-down product development with a community-driven approach.
- Instead of leadership setting the direction, tech teams engage directly with the community to solve real problems in Singapore.
- These teams then design and build solutions that they discover.

Singapore government tech stack

We use cookies

We use cookies and other tracking technologies to improve your browsing experience on our website, to show you personalized content and targeted ads, to analyze our website traffic, and to understand where our visitors are coming from.

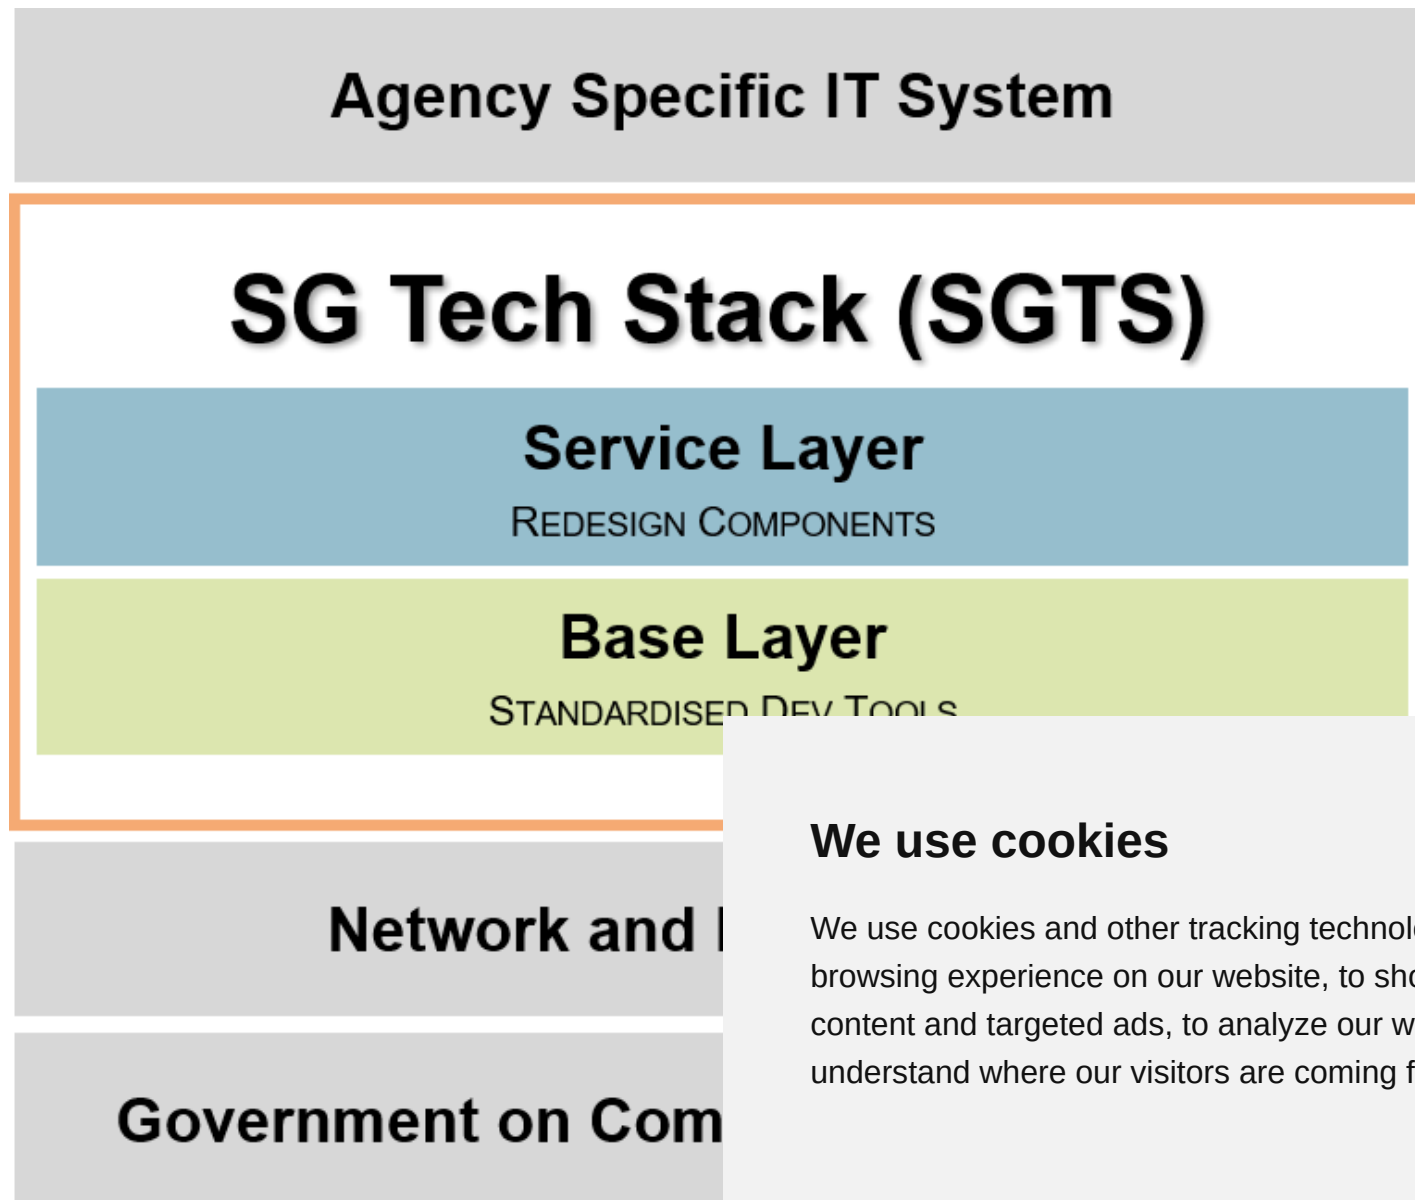

Overview

- The **Singapore Government Tech Stack (SGTS)** modernises development practices across the whole government.
- The goal is to support the creation of secure, responsive systems that keep up with evolving citizen and business needs.

Success story

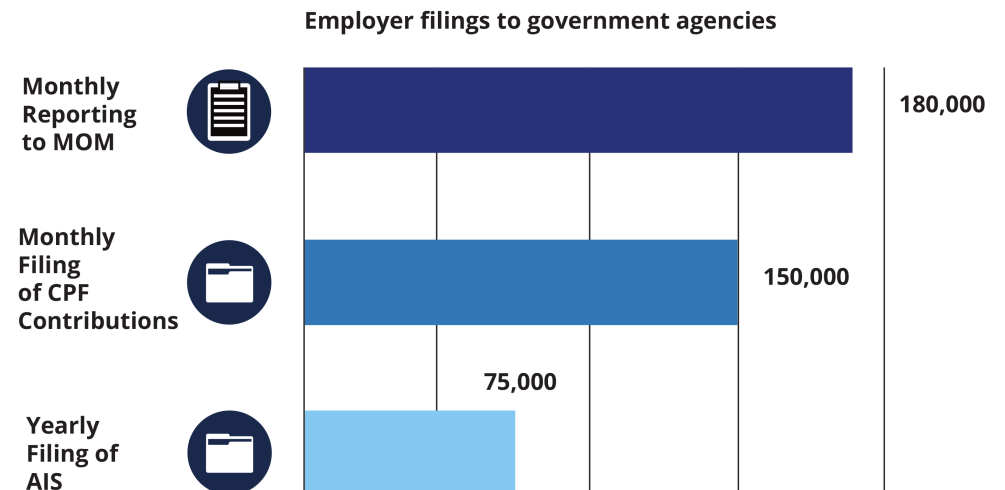

Streamlining Payroll Submissions in Singapore: APEX's Solution for Efficient Government Reporting

We use cookies

We use cookies and other tracking technologies to improve your browsing experience on our website, to show you personalized content and targeted ads, to analyze our website traffic, and to understand where our visitors are coming from.

The Problem

- Singapore-registered companies must regularly submit employee salary, workforce, and CPF contribution data to various government agencies (IRAS, MOM, CPFB).
- All required data already exists within companies' payroll or HR systems.
- The challenge is to integrate government submissions with these systems to streamline processes, reduce manual work, and save employers time and resources.

We use cookies

We use cookies and other tracking technologies to improve your browsing experience on our website, to show you personalized content and targeted ads, to analyze our website traffic, and to understand where our visitors are coming from.

The solution

- **APEX** unifies APIs from multiple government agencies on one secure platform.
- It enables developers, including HR and payroll software providers, to integrate easily with these services.
- APEX removes the need for manual filing reducing administrative burden and supports better compliance with payroll-related regulations.
