Data subject matter experts

- Handle data in their daily roles such as creating, using, storing, defining, managing, or deleting it. They are responsible for:
 - Reporting data governance progress and challenges to the Data Governance Team.
 - Ensuring data integrity and security, and adhering to organisational policies and regulatory requirements.
 - Applying best practices, maintaining data quality, addressing data issues, and supporting accurate, timely reporting.
 - Promoting collaboration between business and technical teams to support effective, data-informed decision-making.

Group roles - Data coordination groups

- Develops, implements, monitors, and promotes data policies within their domain, in alignment with corporate data governance.
- Creates and encourages the use of common metadata, controlled vocabularies, and data standards for their data area.
- Provides guidance, reports progress, and escalates issues to strategic leadership when necessary.
- Links business and policy needs to data assets and identifies data gaps at corporate, interservice, or local levels.
- Works with other groups and governance panels to develop and implement data policies and actions.
- Offers support and sharing expertise with component groups within their domain.

Group roles - Data governance boards

- Supports the effective implementation of corporate data governance and policies.
- Ensures local data policies are created and aligned with corporate guidance.
- Monitors their department's maturity in data governance, management, and use.
- Promotes data governance, data use (including reporting, analytics, and AI), and data literacy at all organisational levels.
- Advises on the human and financial resources needed to develop, implement, and maintain data governance and data policies.

Individual roles - Local data correspondent

- Acts as the main point of contact for data management within their DG/service.
- The role may be shared or delegated to multiple people based on the department's size and needs.
- DGs/services may establish local data governance teams to help implement data governance and provide support to the LDCs.

Individual roles - data owner

- Data owners are managers or staff appointed by strategic leadership to take responsibility for a specific data domain or data asset.
- The term refers to business owners of data, not IT system owners or providers.
- Every data asset must have a clearly designated data owner.
- Data domains may also have owners.

Individual roles - data steward

- Data stewards are subject matter experts for a specific data domain or data asset.
- They are appointed by, and support, the designated data owner.
- Data stewards may operate beyond their own organisational unit if needed.
- They often work with specialists such as data modelling and c requirements to IT teams.
